

HOW CAN HEALTHY YOUNG WOMEN HELP IN THE FIGHT AGAINST CERVICAL CANCER?

Help us investigate a vaccine to prevent infection with Human Papillomavirus (HPV).

Preventing infection with HPV can reduce the risk of developing cervical cancer.

Infection with HPV is often an undiagnosed condition that occurs commonly in young sexually active adults and certain types of HPV infection are related to the development of cervical cancer.

WHO IS NEEDED FOR THE STUDY?

Healthy Women aged 18 -25 years
